

Cheat Sheet To Avoid ABA Claim Denials

Prebilling audits before claim submission will reduce Rejections & Denials. It will help you increase the clean-claim and first pass ratio & speed of collections. Let's see how it helps!

Denials and rejections can be arrested through the prebilling audit process before submitting the claims to the payer in 4 steps:

Verification of Benefits (VOB) and Authorization

If you file claims without verifying a client's insurance coverage, the health plan can surprise you with either a rejection or denial.

Our experts will help you verify client information and VOB thoroughly in the initial screening with the insurance carrier. Prebilling audits of VOB and Authorization will help you avoid rejections and/or denials like Out of network, authorization, eligibility-related issues, etc.

Missing deadline to submit the claims

Prebilling actively monitors the visits from the appointments and has an eye on the transmission of the claim no later than 7 days (TFL related issues arrested).

Delay in receiving payments, claims added to the AR bucket

The prebilling audit process will help you solve the claims within 30 days from submission and increase the Speed of collections and first-pass ratio. It will keep the AR Clean and organized.

Most frequent denials facing Autism billing and how can it be arrested?

MUE, authorizations, eligibility, and modifier are the most frequent denials in Autism Billing, and all these can be arrested through prebilling validation. All the MUE and Authorizations are thoroughly monitored and corrected before submitting the claims to the payer to avoid denials.

Finally, the claim form is validated thoroughly before submission by our prebilling experts and will help you by being free from denials and rejections. Most claims are paid in the first submission itself which increases cash flow for the ABA Practice.
